

Steps to create JAR file:

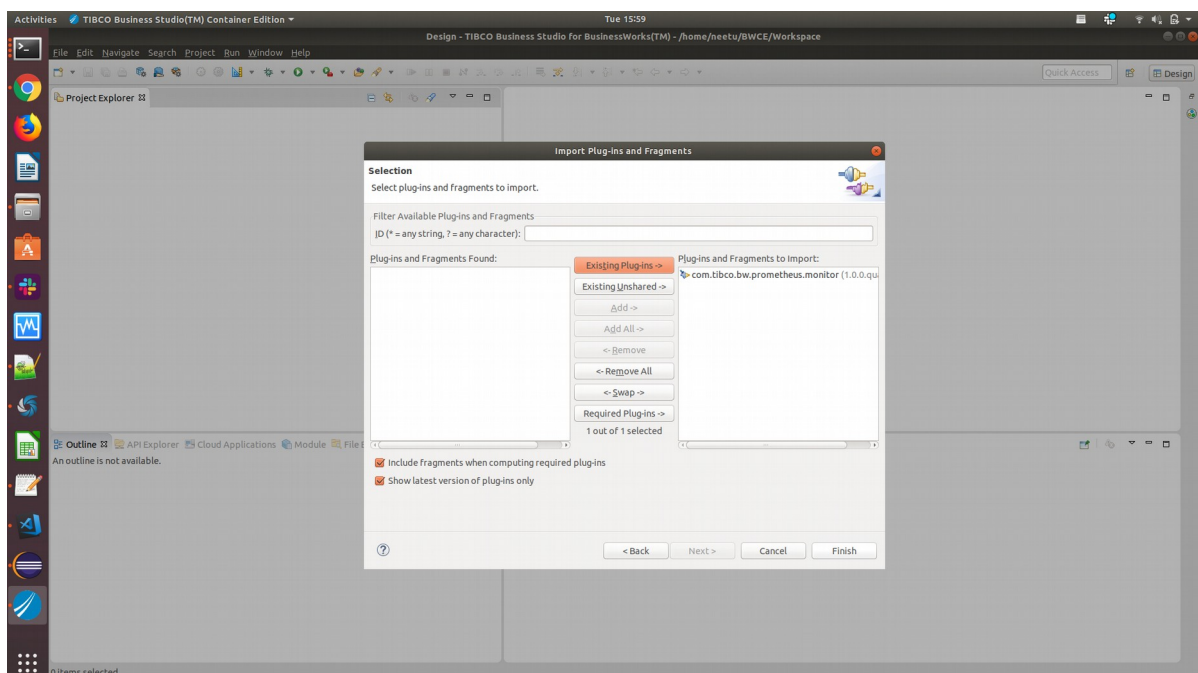

1) Download & unzip the prometheus-integration.zip folder.

2) To import it in TIBCO BW studio follow below steps:

Right click in Project Explorer -> click Import... -> select Plug-ins and Fragments -> select Import from directory radio button and browse it to prometheus-integration folder (unzipped in step 1)

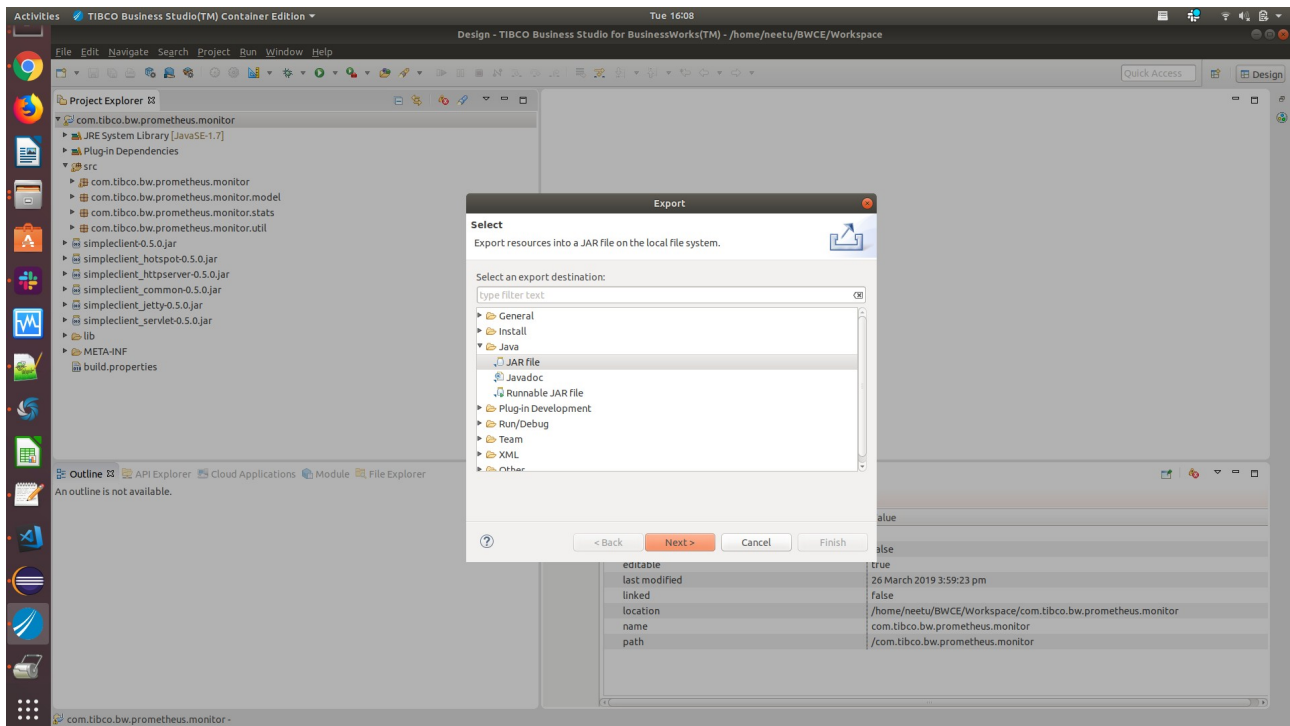

Now click Next -> Select Prometheus plugin -> click Add button -> click Finish. This will import the plugin in the studio.

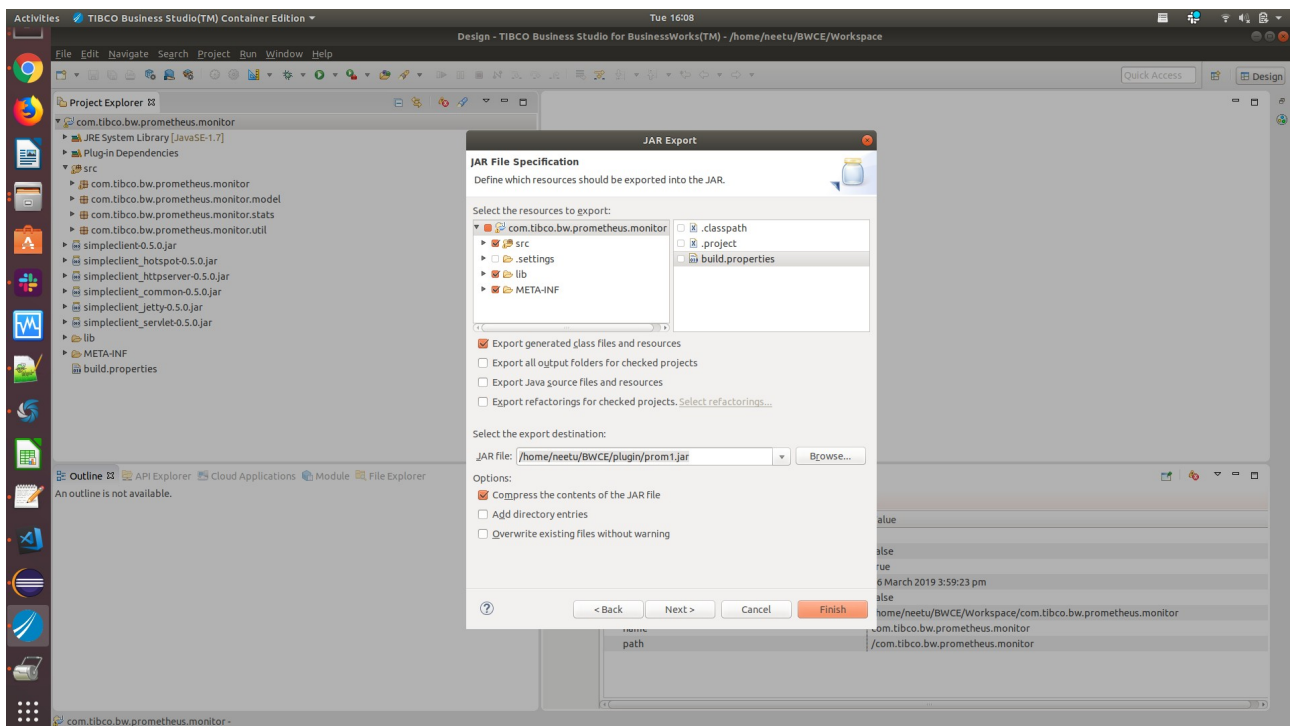

3) To create JAR of this plugin, follow below steps:

Right click on Plugin -> Export -> click Export... -> select type as JAR file

click Next -> select file specification as given below -> click Finish

This will generate prom1.jar (or name given by you).
