Steps to create JAR file:
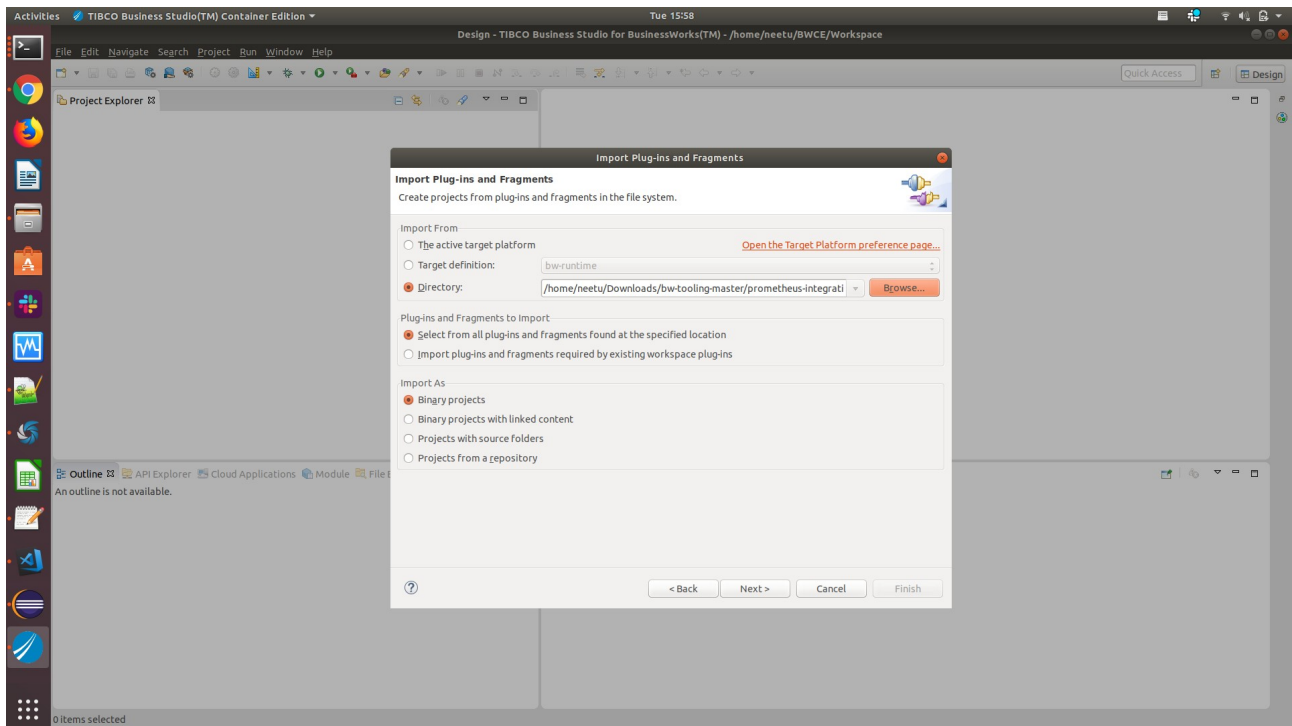

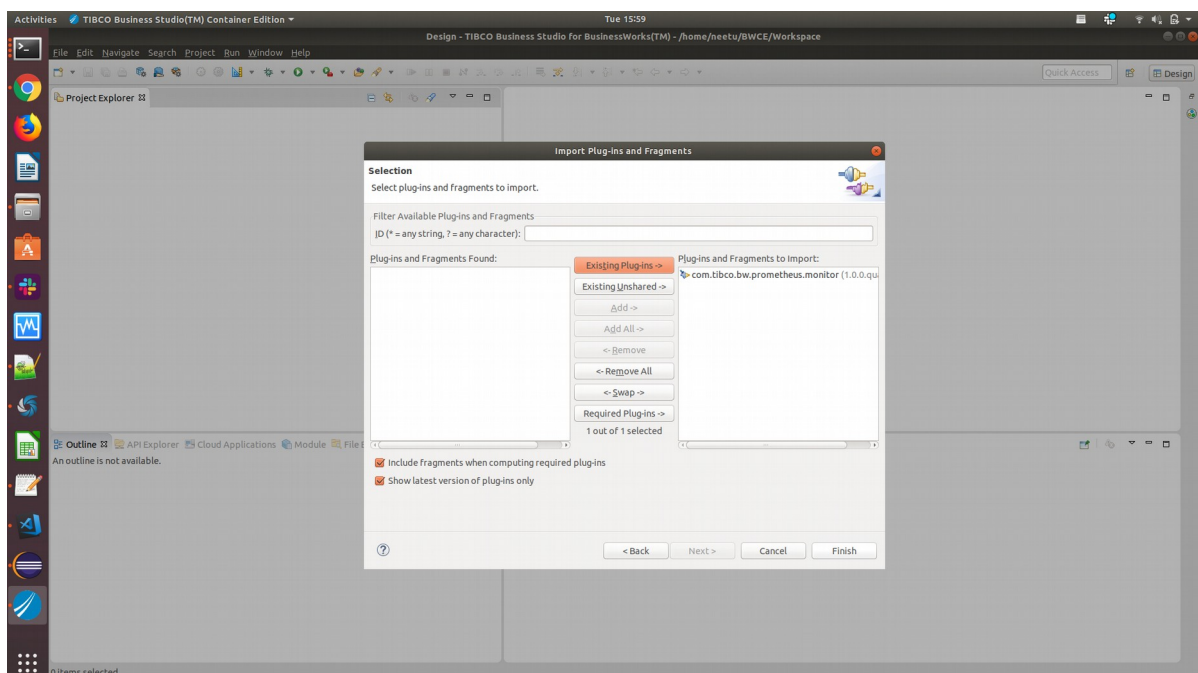

1) Download & unzip the prometheus-integration.zip folder.

2) To import it in TIBCO BW studio follow below steps:

Right click in Project Explorer -> click Import... -> select Plug-ins and Fragments -> select Import from directory radio button and browse it to prometheus-integration folder (unzipped in step 1)

Now click Next -> Select Prometheus plugin -> click Add button -> click Finish. This will import the plugin in the studio.
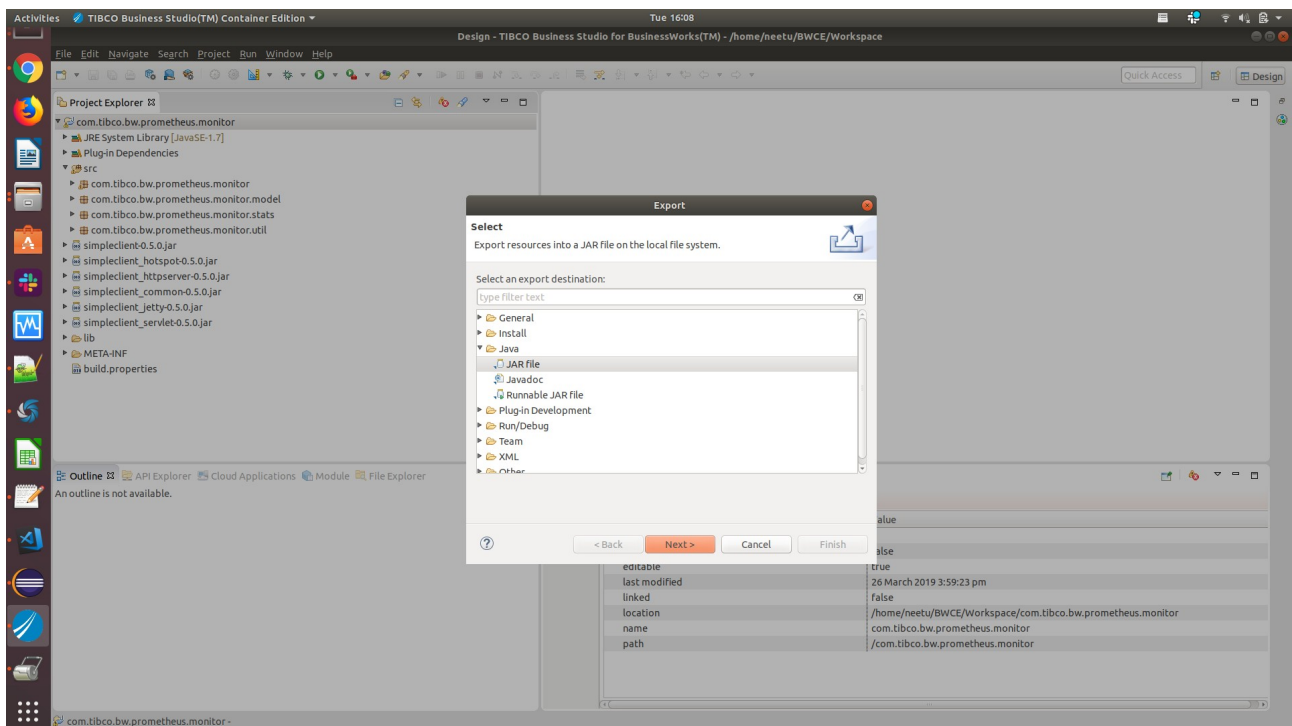

3) To create JAR of this plugin, follow below steps:

Make sure to update `com.tibco.bw.prometheus.monitor` with . (dot) in Bundle-Classpath field as given below in META-INF/MANIFEST.MF file:

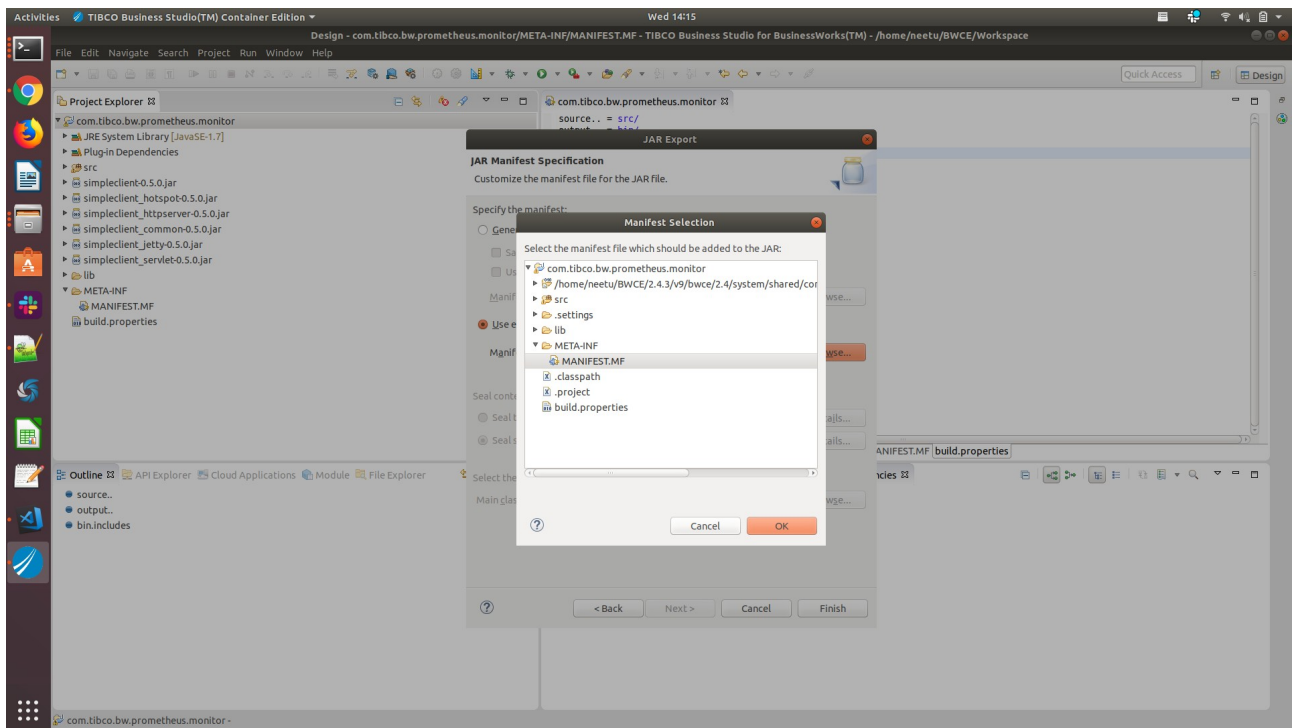

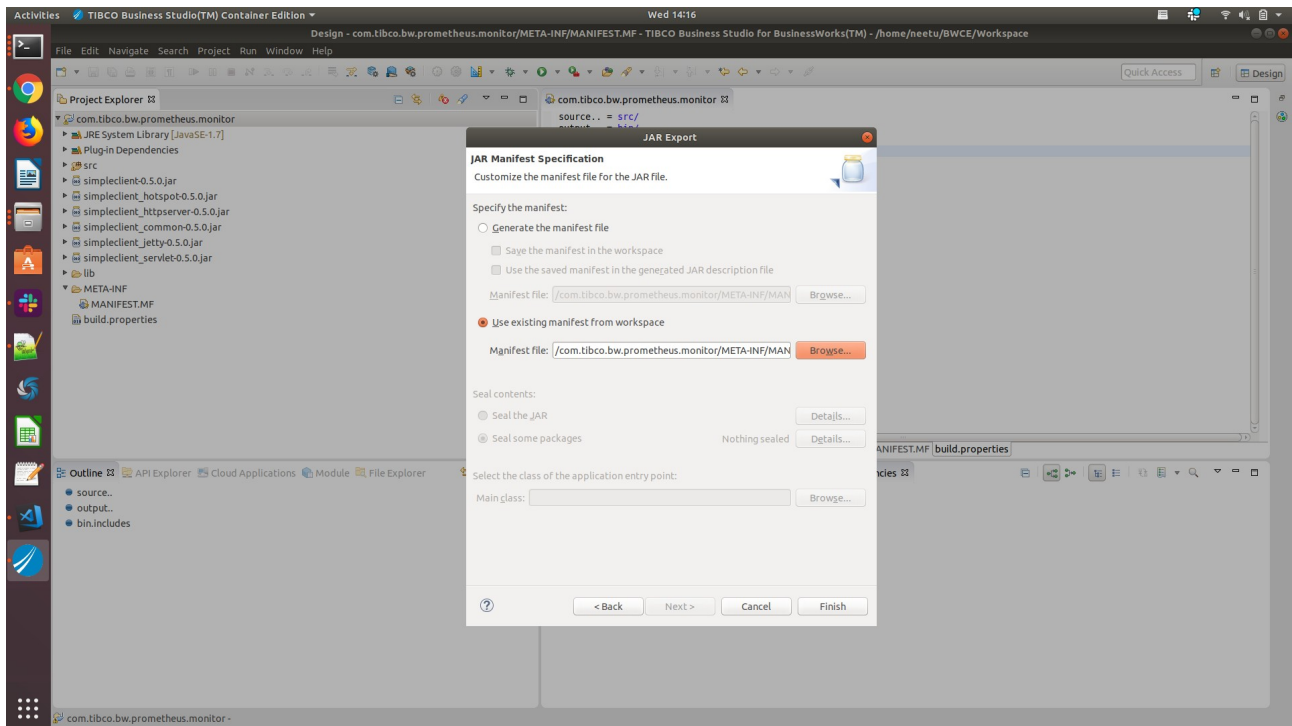

Right click on Plugin -> Export -> click Export... -> select type as JAR file

click Next -> select file specification as given below -> click Finish

Click Next -> again click next -> select radio button to use existing MANIFEST.MF flie and browse th manifest file

Click Finish. This will generate prometheus-integration.jar (or name given by you).
